FIG. 3

Developer creates a graphical program generation (GPG) program, wherein the GPG program is operable to generate a plurality of graphical programs, based on received information

200

Specify program information, e.g., in response to user input, wherein the program information specifies desired functionality to be implemented in a graphical program

204

execute graphical program generation (GPG) program

206

GPG program receives information specifying functionality for a graphical program (or graphical program portion)

208

GPG program programmatically generates a graphical program (or graphical program portion) to implement the specified functionality

FIG. 19

The top screenshot displays the LabVIEW Express interface for a new application named 'tmp001.vi'. The main window is titled 'Waveform Graph' and shows a plot of Amplitude versus Time. The Y-axis (Amplitude) ranges from -10.0 to 10.0 with major ticks every 2.5 units. The X-axis (Time) ranges from 0.0 to 100.0 with major ticks every 20.0 units. The plot area is currently empty, showing only the axes and a 'Plot 0' label in the top right corner. The bottom toolbar includes icons for Run, Stop, and other development functions, along with a font size dropdown set to 13pt.

The bottom screenshot shows the 'Diagram' window for the same application. It displays a block diagram with three main components connected in a linear sequence: 'Simulated Analog Input1', 'Process Data1', and 'Waveform Graph'. Below each component is a brief description: 'Get data from a device' for the input, 'Process the data' for the processing block, and 'Display the data' for the waveform graph. The interface is consistent with the top screenshot, showing the same menu bar and toolbar.

FIG. 24

FIG. 25

Display a node in a graphical program in response to user input requesting inclusion of the node in the graphical program

350

Display a graphical user interface (GUI) input panel in response to user input requesting to provide configuration information for the node

352

Receive user input via the GUI input panel specifying configuration information for the node, wherein the user input includes user input specifying an alias for at least one input terminal or output terminal of the node

node

354

For each input terminal or output terminal for which an alias was specified display the alias in the graphical program, wherein the aliases visually indicate the corresponding input terminals or output terminals of the node such that the input terminals or output terminals are identifiable for connection to terminals of other nodes in the graphical program

FIG. 32

The screenshot displays the 'collectorTest.vi' application window. The title bar shows the file path 'C:\lvme\lvre.exe'. The menu bar includes 'File', 'Edit', 'Operate', 'Tools', 'Browse', 'Window', and 'Help'. The toolbar contains icons for file operations, a font selector set to '13pt Application Font', and a numeric keypad. A vertical 'Slide' control is on the left, ranging from 0 to 10, with a slider knob at approximately 3.5.

The main display area contains three plots:

- Original Data (Plot 0):** A line graph showing 'Amplitude' (0.0 to 10.0) versus 'Time' (250 to 300). The waveform is a periodic signal with peaks around 8.5 and troughs around 2.0.
- Waveform Chart:** A line graph showing 'Amplitude' (0.0 to 10.0) versus 'Time'. It displays two averaged waveforms: 'Avg of 100 Samples' (a smooth curve) and 'Avg of 10 Samples' (a slightly noisier curve). Both show a gradual decrease in amplitude over time.
- Amplitude 2:** A line graph showing 'Amplitude 2' (0.0 to 10.0) versus 'Time'. It displays two averaged waveforms: 'Average of 100 Samples' (a smooth curve) and 'Average of 10 Samples' (a slightly noisier curve). Both show a periodic signal with peaks around 7.5 and troughs around 3.0.

At the bottom, the status bar shows 'Development' and a timestamp '13:48:12.54 03/15/2001'.
